

Webshop

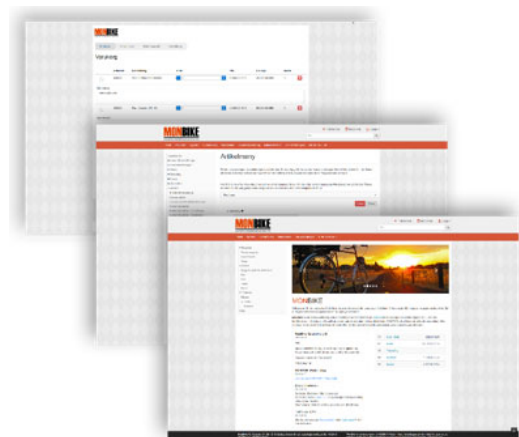

The Webshop is an efficient way of marketing your company, products, and services. It will also help you increase your availability and simplify your sales. You can use your web shop to reach corporate customers, private customers, and retailers in one and the same channel. Doing business get's easier!

Functions in the Webshop

It is easy to get started with the MONITOR Webshop and you can quickly start doing business.

The webshop has a user friendly administration interface that helps you to configure the layout as well as the content and functionality of the webshop.

The information in the webshop is always up-to-date since all data is loaded directly from MONITOR.

The layout will automatically adjust to the visitor's screen size regardless of whether the visitor uses a smartphone, tablet computer, or computer.

Depending on the domains customers visit and by creating user groups, you can limit the customers' access as well as grant access to different parts and information.

The webshop supports the currencies registered in MONITOR, which will make it easier for you to reach new markets.

The webshop is delivered with the languages Swedish, English, Finnish, Lithuanian, Russian, Norwegian, Danish, and German. Please contact us if you are interested in any other language.

More Functions:

- Built-in feature supporting invoice payments and card payments (Nets, PayPal, Klarna Checkout, Klarna Invoice, invoice via MONITOR)
- Status on orders/quotes/service orders/nonconformities
- Automatic import of orders and quotes to MONITOR
- Creating customers in MONITOR
- Creating web users based on customers in MONITOR
- Advanced access system which is based on user groups
- Linking images, texts, and documents to products • Statistics via Google Analytics
- Support for handling of configured parts
- Managing freight costs by weight, order value, volume, and where the customer is situated
- Freight additions such as express freight, wrapping, etc.
- Quick order - ordering parts by using part number
- Shopping list containing parts often purchased or which will be purchased
- Discount offers
- Linking properties and filtering parts by these
- Purchasing parts using CSV files

Maintenance

Webshop is constantly being developed and improved. With the "Adaptation updater", an update program delivered with the webshop, you can access the improvements instantly. It is very easy to update the webshop thanks to the "Adaptation updater".

System Requirements

In order to run the web shop you need to equip your server with the following:

- Windows Server 2008 or later version
- IIS 7 or later version
- .NET Framework 4.6.1 or later version

For security reasons we recommend that the webshop and MONITOR are installed on different servers. The MONITOR server should be located in the internal network (LAN) while the web server should be located outside the internal network (DMZ).

In addition to this, the web server also has to be able to communicate with the MONITOR database server (application server in MONITOR G5).

We Will Help You Get Started

Our support department can help you with the installation and training, for a smooth and quick start up!
