What is an ERP system?

Enterprise Resource Planning (ERP) is a comprehensive software solution that efficiently integrates and automates all essential business processes within a company. The primary purpose of the system is to consolidate a company's operations into a unified platform, centralizing the management of aspects such as inventory, production, and time tracking.

MONITOR ERP CAN HANDLE:

Accounting	Manufacturing	Purchase
Time recording	Stock	Sales

Who is it for?

This whitepaper is for those seeking optimization opportunities in their manufacturing company and looking for a partner who deeply understands their industry and challenges. Gain insight into how our ERP solution for manufacturing companies can solve your challenges and create value for your business.

Relevant for:

· CEOs
· Production Managers
· CFOs
· IT Managers

Get a solution for

your industry

Regardless of the type of manufacturing company you work in, you face challenges that must be addressed. These challenges are dynamic and change as society develops and customer demands increase. Nevertheless, there are several common challenges we encounter more often, and that you might also recognize. Some of these challenges can be mitigated through process changes and new technology.

What is your challenge?
Monitor has the solution

When we meet with manufacturing companies and discuss challenges in their inventory and production, we draw on our extensive experience from the manufacturing industry. Many companies share the same challenges. Here are five common challenges and how an ERP system like Monitor can help solve them.

#1 Inventory Management and Waste

Manufacturing companies often struggle with inefficient inventory management, leading to excess inventory, discontinued items, or outdated products. This results in waste and increased costs.
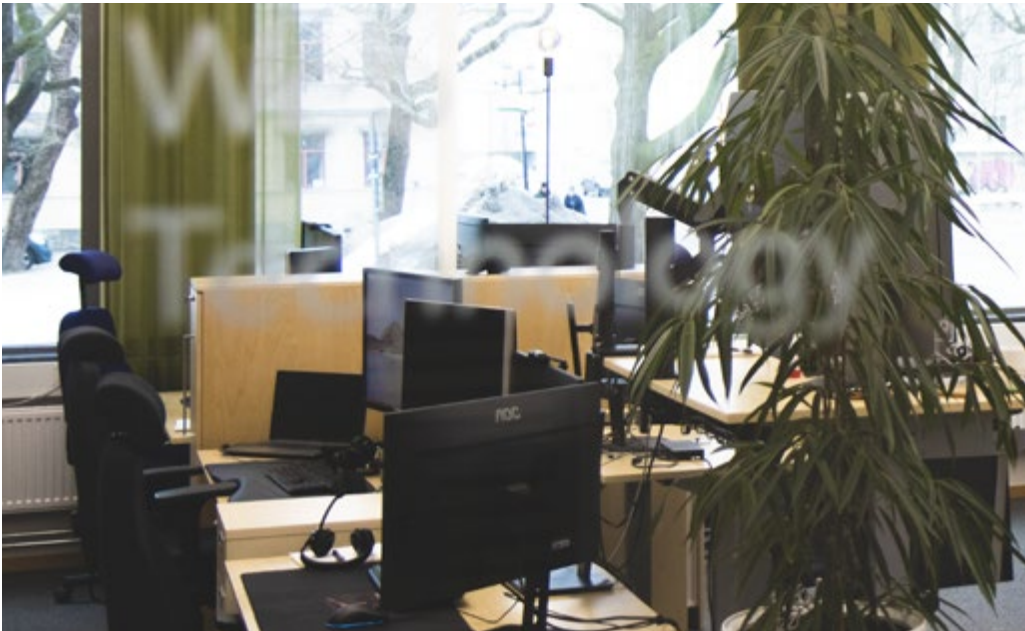

Solution with Monitor ERP

Monitor ERP provides real-time updates and precise inventory management, helping companies keep track of inventory levels, minimize waste, and optimize replenishment processes. The system also provides alerts when inventory levels are low and helps plan and forecast needs more accurately.

#2 Cost Management

Manufacturing companies often find it challenging to track and control costs, which can impact profitability.

Solution with Monitor ERP

Monitor ERP helps companies monitor and manage costs by providing detailed insights into production costs, labor costs, and material usage. The system also allows for the calculation and analysis of costs across different departments and projects, helping identify cost-saving opportunities.

#3 Quality Control and Traceability

Maintaining high quality and traceability in the production process can be challenging without the right system, leading to defective products and dissatisfied customers.

Solution with Monitor ERP

Monitor ERP includes comprehensive features for quality control and traceability, helping ensure that all products meet the required quality standards. The system can also track products throughout the production process and supply chain, making it easier to quickly identify and address issues.
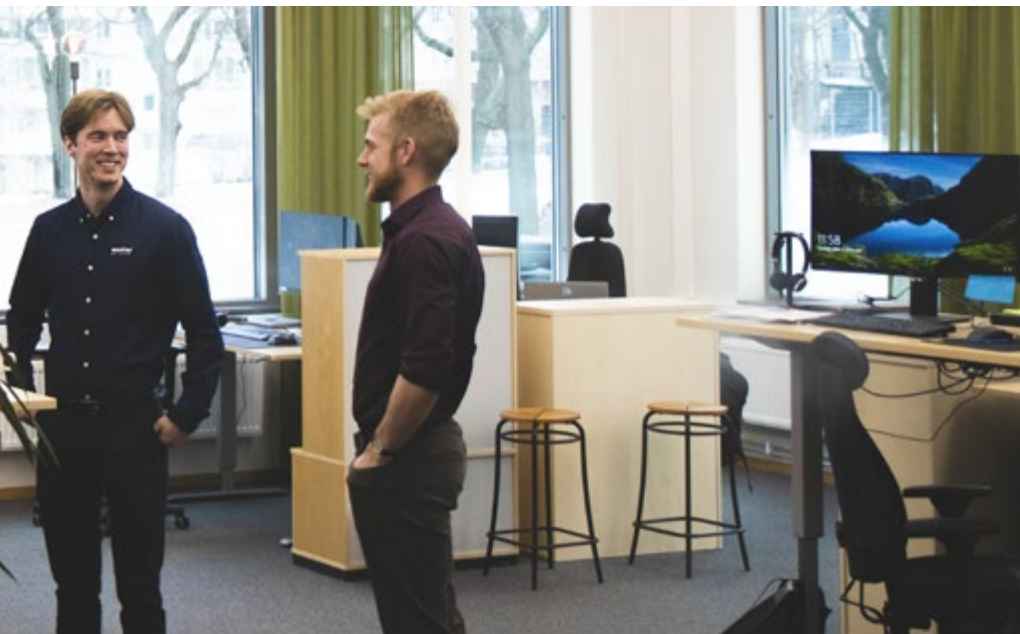

#4 Production Planning

A correct production plan is crucial when goods need to be produced and procured. Challenges with production planning can lead to bottlenecks, delays, and inefficient resource utilization.

Solution with Monitor ERP

A correct production plan is crucial when producing and procuring goods. However, it can be challenging to keep an overview when new, more critical orders need prioritizing. Monitor ERP offers advanced tools for production planning and management, helping companies plan production more accurately, allocate resources efficiently, and reduce downtime. The system can also simulate different scenarios to optimize the production process.

#5 Integration of Business Processes

A lack of integration between different departments and systems can lead to inefficiencies and information silos.

Solution with Monitor ERP

Monitor ERP acts as a central platform that integrates all business processes, from procurement and production to sales and finance. This ensures that all departments work with the same data, improving collaboration and efficiency. The system also provides real-time insights into the company's performance, helping management make informed decisions. We offer easy integration between the ERP system and CAD programs, Nesting and PDM data management.

Do you need a partner?
Optimize your output with Monitor

With Monitor ERP as your partner, you get a comprehensive and reliable solution that helps you manage and optimize your company's processes. Monitor ERP ensures that you have full control and oversight of your operations, leading to increased efficiency and better decision-making.

Industry knowledge and expertise

When your company chooses a partner, it's crucial to select one that is professionally and strategically knowledgeable with in-depth industry expertise. Monitor's consultants have extensive experience in manufacturing companies, ensuring you get a solution tailored to support your business processes and workflows based on best practices.

Transparent implementation

We've all heard horror stories about IT projects going off the rails. Therefore, it's crucial to choose an IT partner who ensures the project reaches its goal safely. At Monitor ERP, we have honed our project methodology through numerous ERP implementations over more than five decades.

Scalability and customization

With many years of experience and extensive industry knowledge, we understand that order-producing companies need flexible solutions that can be customized and scaled according to needs and meet customer-specific requirements. Monitor's standard solution is designed to be both scalable and adaptable, making it suitable for companies of different sizes.
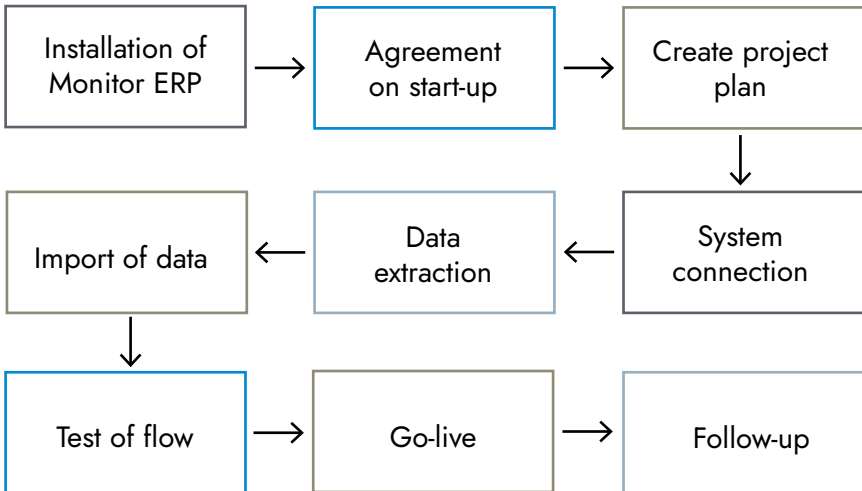

Supporting the value chain and processes

It is crucial that your company chooses a solution that supports the entire company's value chain and various processes. Our consultants have a deep understanding of your business and challenges, ensuring that our solution meets your specific needs. We possess the necessary expertise to guide you to success.

Easy Implementation
Monitor shows the way

Choosing Monitor ERP gives you access to our extensive expertise in enterprise resource planning. Our dedicated consultants will guide you through the entire process to ensure that the implementation goes as smoothly as possible. See a typical implementation process below:

IMPLEMENTATION STEPS WITH MONITOR:

Installation of Monitor ERP	→	Agreement on start-up	→	Create project plan
				↓
Import of data	←	Data extraction	←	System connection
↓				
Test of flow	→	Go-live	→	Follow-up

A system for your needs

Monitor ERP is a standard system optimized for manufacturing companies, so you don't need to spend time and money on customizations or expensive specialized solutions. The system is easy to keep updated, and you naturally have access to all new versions we release with new functionality and ongoing improvements—at no extra cost.

Due to the standardized nature of the system, implementation usually proceeds very quickly. We monitor and analyze how you work, decide the best way to implement Monitor ERP in your company, and train your employees. With us as your partner, you can be sure to achieve your goals with your upcoming ERP project.
